Course Description:
The digital revolution has transformed the way business decisions are made. Today, business managers must be able to knowledgeably identify relevant information technologies that can support a firm to create value and achieve a competitive advantage. As managerial decisions are becoming evidence-based, managers should also acquire technical skills on how to use computer-based information technology in order to improve decision making. From a technical standpoint, the goal of this course is to help students acquire specific software skills that can be applied in the field of management. From a theoretical perspective, this course will help students acquire knowledge about the impact of IT on organizations.

Learning Outcomes:
- master the basic concepts of information systems in an organizational context.
- explain the strategic and transforming role of IT in all types of organizations.
- be familiar with basic tools used to improve decision-making, organize and access information and facilitate collaboration.
- apply different frameworks to analyze the role of IT and understand how organizations create value from IT.
- understand the importance of data management and its impact on managerial decision making.
- Identify the advantages and risks of IT in an organizational context.
