

Selected Topics in Political Science - POLISCI 3395G

Course: Human Rights, Artificial Intelligence and Cybersecurity

Instructor: Laszlo Sarkany

The aim of this course is to introduce students to critical political and social issues at the intersection of human rights, artificial intelligence – or technological systems with independent decision-making capabilities using ‘big data’ – and cybersecurity. The emphasis in this course will be on understanding how ‘actual’ artificial intelligent systems impact such critical aspects of human rights as privacy, data security, discrimination, inclusion, transparency and accountability.
