Disclaimer: Information in the brief course outline is subject to change. The syllabus posted on OWL is the official and authoritative source of information for the course.

Course Description:

An introduction to method and content in psychology. The content areas covered include physiological psychology, perception, learning and motivation, memory and cognition, developmental psychology, individual differences, personality, social psychology, and applied psychology. Method is studied through direct experience with research design and the collection, statistical treatment, and reporting of data.

Learning Outcomes:

Identify and describe theories and concepts from the most important content areas in psychology
Think critically about empirical research
Analyze data and report the results of simple empirical research
